Vision Statement: I am a freelance researcher, philosopher, and educator with an extremely transdisciplinary track record. My investigations, first as the leader of an empirical research group, later as a theoretician and the director of an institute for the philosophy of biology, have always revolved around a process perspective on the organism and its evolution. I am interested in fundamental questions such as the limits of (genetic) reductionism, dynamical systems modeling, and mechanistic explanation in biology. My current projects deal with the use of models as epistemic tools, with causality in complex adaptive systems, and with the nature of organismic agency and its role evolution. In recent years, I have also developed an interest in promoting open science and open innovation. Crossing disciplinary boundaries is an essential aspect of my work. Teaching and mentoring are my passions. I have a talent for facilitating interdisciplinary interactions, and a proven track record for building a supportive, productive, and creative academic environment.

Recorded Lectures

My lecture series “Beyond Networks: The Evolution of Living Systems” presents a new processual perspective on evolution, which focuses on the nature of organisms as goal-seeking agents.

I teach a crash course in the philosophy of science for scientists, called “Science as Process and Perspective.” It consists of moderated discussions and a series of lectures, which are available online.

Another lecture series, given annually to the biology PhD students of Cambridge University, is entitled “Modelling in Developmental Biology.”

These lectures are publicly available on my YouTube channel:

<https://www.youtube.com/channel/UCStM7WbWmY1UZsg5nHdUuGA>.

Apart from the “Beyond Network” lectures (see above), there are a number of my public talks that have been recorded which can be accessed through this playlist:
